**Database: Mango Languages**

Reviewed by A.F., Operations Management Major/ Information Technology & Social Responsibility Minor, Senior on 9/21/2016

**Why do I like Mango Languages?**

I like using Mango Languages because they incorporate basic conversation skills with its respective cultural settings all into one database. This way it is easy for someone to learn what they can say in each environment. Mango Languages also includes movies with subtitles in English and the language of your choice for people who are not expose to the language on an everyday basis to hear the language in action. Another aspect of Mango Language I like, is that Mango Language has a decent selection of languages along with interesting dialects such as Pirate, Hawaiian, Shakespearean English and Latin.

**How have I used Mango Languages?**

I have used this database to practice my Italian outside of my Italian 1001 course and actually learn more about the culture itself rather than just learning a language. By downloading the app on my phone, I was able to take the lessons on the go and practice wherever and whenever I had free time in my day. This database also allowed me to freshen up my memory of previous languages I have learned such as Spanish and Mandarin.

**How can I use Mango Languages?**

I can further use this database to learn other languages within their selection along with its respective cultures. I can also track my activity and join a Mango Lab to better develop my language skills. Lastly, Mango Languages allows users to improve Mango’s contents by allowing users to contact them to leave suggestions on how Mango Languages can improve and develop more features.
